

NOTE: There are three ground points in the amp.

G1 is the low ground bus bar, near the input on the chassis. All input, preamp tube, volume & tone, and smaller filter cap grounds.

G2 is the high ground, on the opposite side of the chassis near the PT. Power tube, output transformer, biggest filter cap ground.

G3 is the 240V ground, on a mount bolt of the tube rectifier socket. Only the 240v supply ground attaches here.
